STATUS LABELS

● LIVE running on mainnet and open to everyone.

● ALPHA live and usable, still being hardened and extended.

● COMING SOON designed and on the roadmap, not yet available.

A LETTER FROM THE FOUNDERS

We built a chain, then we gave it away.

DO started in 2024 as a meme coin on Terra Classic. The community that gathered around it wanted more than a joke that went up and down. They wanted money that held its value, products that did something and a say in how it all worked.

So we built DO Chain, our own Cosmos Layer 1, and launched it in May 2026. Then we did something most founders don't. We handed the chain to the people who use it.

Independent validators secure DO Chain. Holders of **$DODx**, the governance token you can only get by burning $DO, decide how it changes. Every rule change goes through an on-chain proposal. Validators who break the Code of Conduct are reviewed and judged by the other validators, not by us.

Put simply: **we own everything but the chain.** DO Corp builds and runs the products on top of it: the wallet, the exchange, the launchpad, NFTs, gaming, the metaverse, real-world assets and our humanitarian tokens. We earn from those products, and we share part of what they make with the people who govern the chain.

This paper explains what has been built, what is live today, what is coming next and how you can take part. Where something is not ready yet, we say so.

Nicolas Boulay

FOUNDER & CEO, DO CORP

Mike Wood

CO-FOUNDER & COO, DO CORP

THE SHORT VERSION

- **DO Chain** is a public, decentralised Layer 1. It is governed by its validators and $DODx holders.
- **DO Corp** is the company that builds the applications. It does not control the chain.
- Every application settles in **$DO**, so more use means more demand for the chain's native token.
- One wallet reaches everything: trading, earning, real-world assets, memecoins, NFTs, giving, gaming and the metaverse.

> **"Crypto was meant to be a hedge against large institutions, inflation and banking you can't get into. We're building the version that keeps that promise."**
>
> DO CORP MISSION

EXECUTIVE SUMMARY

A complete DeFi economy on a chain its users govern

DO Chain is a Cosmos-SDK Layer 1 running CosmWasm smart contracts and connected to the wider interchain through IBC. It is built as a *monetary rail*. Trading, minting, payments, NFT sales and cross-chain transfers all settle in one native asset, **$DO**.

$DO is deflationary by design. The chain currently reports 0% annual inflation. Governance power ($DODx) can only be acquired by burning $DO. Fees from across the ecosystem are recycled into rewards rather than extracted.

The chain is decentralised. Six independent validators produce blocks, and protocol changes are decided by on-chain vote. DO Corp, the builder, owns the applications but not the chain.

On top of the chain, DO Corp operates a full-stack DeFi ecosystem. One self-custody wallet reaches every part of it:

- **Trade** 20 crypto assets across 30 pools on DO DEX, live now. Perpetuals and forex are coming soon.
- **Launch** memecoins and new tokens through the DO Launchpad.
- **Hold real-world value:** gold and silver are live today through Golden Gram and Silver Gram, with DO Equities coming soon.
- **Collect and own:** DO Nexus NFTs and DO Names identities.
- **Do good:** Food Token funds farms in Uganda.
- **Play and gather:** DO Gaming and the DO Misfits metaverse.

STORYBRAND · SB7

The story on one page

The rest of this paper follows one story. You are the hero, not us. Here it is in seven beats.

1

CHARACTER **You want your money to work for you**

You might be a crypto-native trader, a long-term holder, a builder, a gamer or an investor looking for real-world value. Whoever you are, you want ownership and opportunity without asking anyone's permission.

2

PROBLEM **The system keeps getting in the way**

Inflation erodes your savings. The best markets are gated. DeFi is spread across a dozen apps, chains and bridges, and one bad click can empty a wallet. Deep down it feels unfair: finance should belong to the people who use it.

3

GUIDE **DO Corp has walked this road**

We started as a community meme coin and shipped our way to a sovereign Layer 1, a 34-network wallet and a live exchange. We understand the frustration because we've lived it, and we hand you the chain rather than keeping it.

4

PLAN **Three simple steps**

1. Open a DO Wallet. 2. Get $DO and use the ecosystem: trade, earn, collect, play. 3. Stake, burn for $DODx and help govern the chain.

5

CALL TO ACTION **Start today**

Direct: open DO Wallet and enter DO DEX. Transitional: read the token model, follow governance on do-chain.com, or talk to the team about partnering.

6

FAILURE **What standing still costs**

Your savings keep losing value, the tokenisation wave passes you by, and your keys and your vote stay with intermediaries.

7

SUCCESS **Money you can verify, an economy you co-own**

One wallet, one settlement asset and one community-run chain. Your activity strengthens the network you help govern, and some of it funds food for families who need it.

THE PROBLEM SB7 · PROBLEM

01

The old system asks you to take everything on faith

Your savings, your access to opportunity and your trust in a black box: legacy finance wants all three, and gives back less every year.

EXTERNAL · 01

Inflationary by design

Central banks keep creating money, and that quietly moves wealth from savers to institutions. Fiat loses value over time, and ordinary people pay for it.

EXTERNAL · 02

Gatekept and exclusive

Blue-chip equities, forex and commodities are limited by where you live, what you earn and which intermediary will take you on.

EXTERNAL · 03

Fragmented and unsafe DeFi

Liquidity is split across chains, capital sits idle, value leaks out through bridges, and hacks and phishing still drain wallets every week.

How it feels INTERNAL PROBLEM

Locked out of the assets that build real wealth. Wary of handing your money to an opaque platform. Tired of juggling five apps, three bridges and a seed phrase for each chain just to move your own funds. Unsure which token is a scam until it's too late.

Why it's wrong PHILOSOPHICAL

Transparent, verifiable financial infrastructure should not be a privilege for the few. A blockchain should belong to the people who use it, not to the company that launched it.

> **"Not the trust of a promise. The trust of a settlement layer you can audit yourself."**
>
> THE DO CORP THESIS

OUR ANSWER, IN ONE LINE

A people-governed Layer 1 where every product settles in one deflationary asset, reached from one self-custody wallet.

OUR ORIGIN SB7 · GUIDE · AUTHORITY

02

From meme coin to sovereign Layer 1

We didn't start with a whitepaper and a promise. We started with a community and kept shipping.

2024

DO is born on Terra Classic

Launched as a community meme coin (LUNC Cookie DO). Within months it became a utility ecosystem with circular, deflationary tokenomics.

2024–25

Real utility, before a chain of our own

Artemis DAO became the only USTC staking protocol live on Terra Classic. Food and Land tokens were designed to fund farmers in Africa, and tokenised gold and silver followed.

EARLY 2026

The decision to go our own way

To deliver crypto's original promise properly, we needed our own sovereign rail. DO Corp began building DO Chain on the Cosmos SDK.

MAY 2026

DO Chain mainnet, and the handover

DO Chain launched with an independent validator set. The Validators' Code of Conduct took effect on 11 May 2026. Governance moved on-chain.

JUNE 2026

DO Wallet live, IBC switched on

DO Wallet finished testing and launched. Proposal #2 enabled IBC transfers, opening the LUNC ⇄ DO Chain channel, and holders began migrating legacy LUNC DO and BAKED to native DO and DODx.

THROUGH 202(

DO DEX, Names, Nexus, Gaming, Misfits

The exchange went live for crypto trading, followed by gold and silver. DO Names, the DO Nexus NFT marketplace, the DO Gaming arcade, Food Token and the DO Misfits metaverse (alpha, three worlds) followed.

OCT 2026

Today

Around 7.6 million blocks, 30 live pools, a token launchpad, LP farms, the DODx burn ratchet and governance-proposal history all running in public. Next come the Quantum Vault, perpetuals, forex and real-world assets.

THE MODEL SB7 · GUIDE · EMPATHY

03

We own everything but the chain.

Most "decentralised" projects keep the keys to the network. We split it in two on purpose: a public chain that belongs to its community, and a company that competes to build the best products on it.

For holders

The chain can't be switched off, re-priced or rewritten by one company. Your vote is protected by a 2.5% cap on any single holder.

For builders

Anyone can deploy on DO Chain. DO Corp's products have to earn your use, just like everyone else's.

For DO Corp

We focus on what we're good at: shipping products. The more they are used, the stronger the chain we no longer control.

> **"We'd rather compete to build the best products on a chain we don't control than control a chain nobody trusts."**
>
> NICOLAS BOULAY & MIKE WOOD

BASE LAYER

04

DO Chain: the monetary rail

Most Layer 1s are general-purpose execution environments, and value leaks out to external bridges and DEXs. DO Chain does the opposite. It is built to capture and settle the activity of every application on it.

WHAT IT IS

The settlement and monetary layer for the whole ecosystem. Spot trades, NFT sales, commodity mints, payments and cross-chain flows all settle in $DO.

HOW IT WORKS

A Cosmos SDK chain with CosmWasm smart contracts and native IBC. It uses fast BFT consensus with blocks about every 1.3 seconds. Protocol fee routing and $DO-anchored liquidity are enforced in contracts.

WHY IT MATTERS

Every trade, mint and payment adds $DO utility, fee capture and buy pressure. That turns the chain into the centre of an on-chain economy rather than another execution chain.

Technical profile

COMPONENT	SPECIFICATION
Framework	Cosmos SDK (DEX front end reports v0.53)
Smart contracts	CosmWasm
Interoperability	Native IBC, enabled by governance in June 2026
Block interval	~1.3–1.4 seconds observed
Native token	$DO (denom udo)
Governance token	$DODx, 110,000 maximum supply
Account security	Multi-factor authentication built into the chain

Security at the base layer

We know first-hand how painful hacks and lost funds are for investors, so security is built in rather than bolted on.

- **Chain-level MFA.** DO Chain is one of very few blockchains, and possibly the only one, with multi-factor authentication embedded in the chain itself.
- **Token quarantine** in DO Wallet holds suspicious incoming tokens until the owner approves or rejects them. This cuts exposure to phishing airdrops.
- **Quantum Vault** COMING SOON: quantum-resistant storage that keeps assets safe as quantum computing matures.
- **AI Security Layer** COMING SOON: real-time anomaly detection with automated pool pauses and circuit breakers.

GOVERNANCE & VALIDATION

05

Validators secure it. The people decide.

On many chains, big validators end up controlling governance. DO Chain separates the two roles so no single group can capture the network.

ROLE 1 · VALIDATION

Independent validators

- Produce blocks and earn $DO from a rewards pool topped up by gas fees.
- Admitted only through a public governance proposal.
- Keep a self-delegation of 100 billion $DO, adjustable by governance.

ROLE 2 · GOVERNANCE

$DODx holders

- 1 $DODx = 1 vote, capped at 2.5% of total voting power per holder.
- $DODx can only be acquired by burning $DO, so voting power comes from reducing supply.
- Fixed maximum supply of 110,000 $DODx.

A Code of Conduct the validators enforce themselves

Admission to the validator set binds every operator to the Validators' Code of Conduct (v2.0, effective 11 May 2026). Enforcement is proportionate and contestable, and every step starts with the validator community itself.

STAGE	TRIGGER	OUTCOME
Validator Review	Alleged breach reported	14-day open discussion among active validators before any strike is recorded
Strike 1	First confirmed breach	Written warning and a 14-day remedy period; expires after 12 clean months
Strike 2	Second breach in 12 months	30-day suspension from block production; delegator rewards keep accruing
Strike 3	Third breach in 12 months	Permanent closure, stake returned, public notice
Appeal	Within 14–21 days	Decided by simple-majority vote of the full active validator set

On-chain governance record to date: 8 proposals, including enabling IBC transfers (#2), widening the slashing window (#4) and tuning the oracle reward band (#8). Six validators are active, and none holds more than about 25% of stake.

TOKEN ECONOMICS

06

$DO tightens with use. Central banks print.

Every part of the ecosystem ties back to one settlement asset. The more the network is used, the tighter its supply becomes.

01
Settlement asset
All trades, mints and payments settle in $DO.

02
Fee recycling
Protocol fees fund staking rewards and holder rewards instead of being extracted.

03
Governance burn
$DODx is minted only by burning $DO. Burned $DO is gone for good.

04
LP anchoring
Liquidity pools are anchored in $DO pairs, creating constant demand.

The $DODx ratchet

$DODx is issued in fixed 5,000-token tranches. Each tranche costs more $DO than the last, starting at 2.5 billion $DO per $DODx and rising to 8 billion for the final tranche. The price only steps up.

As of 9 October 2026: 61,614 $DODx issued, 48,386 remaining before the 110,000 cap. The next step to 4B $DO per $DODx comes at 65,000.

Fees that flow back to governors

0.30%	0.10%	1/110k
SWAP FEE, EVERY DEX POOL	DONATED TO $DODX HOLDERS	SHARE PER $DODX

DO Corp donates a third of every swap fee (0.10% of the 0.30%) to $DODx holders, as a thank-you to the community that governs the chain. Each $DODx receives 1/110,000 of that pool for as long as the DEX trades. $DODx is a governance token, and this reward is a voluntary donation from DO Corp, not a promised yield.

On 9 October 2026 the holder reward pool held about 12.6 billion $DO, routed from all 30 live pools.

THE FULL DEFI STACK

07

From your first trade to a whole new world.

Most DeFi stops at swapping tokens. DO is a full financial life: making money, holding real value, having fun, owning your identity and doing good, all from one wallet and all settled in $DO.

07.1 · THE FRONT DOOR

DO Wallet

● LIVE · DO-WALLET.COM

Your keys, every chain. Stop juggling five apps for five chains. DO Wallet is one non-custodial wallet for DO Chain and 33 other networks, with the whole DO ecosystem built in.

34	0	3
SUPPORTED NETWORKS, INCL. BITCOIN, ETHEREUM, SOLANA	SEED PHRASES EVER SENT TO A SERVER	WAYS TO START: CREATE, IMPORT OR MULTISIG

What you can do

- Hold native assets such as Bitcoin and Ethereum **without wrapping them**.
- See balances, staking positions and unbonding across every chain in one portfolio view.
- Stake with validators and vote on governance for all supported chains from one place.
- Browse live markets and keep NFTs from every chain in one gallery.
- Swap via DO DEX, buy and sell, and burn $DO for $DODx directly.
- Migrate legacy LUNC DO and BAKED to native $DO and $DODx.

Security first

Multi-factor authentication

The same chain-level MFA that protects DO Chain accounts, extended into the wallet experience.

Token quarantine

Suspicious tokens are held and flagged automatically. You approve or reject them, which closes the door on scam-airdrop phishing.

Quantum Vault ● SOON

A quantum-resistant vault for long-term holdings, built to protect assets against future quantum-computing attacks on today's cryptography.

SUPPORTED NETWORKS INCLUDE

DO Chain · Bitcoin · Ethereum · BNB Chain · Solana · Cosmos Hub · Osmosis · Injective · Arbitrum · Avalanche · Polygon · Base · Optimism · Sei · Terra Classic · Terra · Cardano · XRP Ledger · Tron · Dungeon · +14 more

07.2 · TRADING

DO DEX and the trading layer

LIVE · DO-DEX.COM

Stop trusting an exchange with your funds. DO DEX is the CosmWasm trading engine at the centre of the ecosystem. You trade wallet to wallet, and every pool is a contract you can inspect.

30	20	0.30%
LIVE LIQUIDITY POOLS	LISTED ASSETS INCL. WBTC, WETH, PAXG, ATOM, INJ	SWAP FEE; ONE THIRD SHARED WITH $DODX HOLDERS

DO DEX

LIVE

Swaps and limit orders with an on-chain order book. IBC-native settlement means no wrapped assets and no bridge risk. Any Cosmos wallet can connect with no account or sign-up.

- Intelligent routing that sends every trade through $DO-anchored pools.
- Built-in card on-ramp: buy INJ by card, Apple Pay or Google Pay, bridge it over IBC and swap into anything.
- Contracts audited internally; a third-party audit is in progress.

DO · DODX · DOUSD · USDC · WBTC · WETH · PAXG · ATOM · OSMO · INJ · LUNC · USTC · LUNCDO · FOOD · ARTEMIS · DGN · QUID · ORBIT · FORK

What comes next

Perpetual Trading Engine

SOON

On-chain perpetual futures up to 50× leverage. Funding rates, an AI-driven liquidation engine and settlement in $DO.

Forex Trading Layer

SOON

Synthetic fiat tokens bring the world's largest market (more than $7.5 trillion a day) on-chain, 24/7, with oracle- and arbitrage-tightened pegs.

AI Trading Bots

SOON

User-owned, non-custodial agents for strategies, arbitrage and liquidity provision. Permissions are limited and revocable.

Auto-Swap Engine

SOON

Pay with any supported token. It routes through DO DEX and settles the merchant in $DO.

07.3 · MEMECOINS & LAUNCHES

Born a meme. Built for the next ones.

LIVE · DO LAUNCHPAD

DO began life as a meme coin, so we know what memecoin communities need: a fair launch, liquidity that can't be pulled and fees everyone can see. The DO Launchpad is built around those three things.

CREATE

0% token tax

Anyone can create and launch a token on DO Chain. Every token is 0% tax at the contract level. Pool creators may set a pool tax of 0–9%, and it is always shown on the front end.

RAISE

Escrowed presales

Presale funds sit in on-chain escrow with soft caps, per-wallet limits and price tiers. The raise seeds a permanent DEX pool.

PROTECT

LP burned, not locked

Liquidity from a presale is burned, so no one, including the launcher, can rug the pool. A dedicated liquidity-lock tool is coming soon.

Proven on day one

The first presale, **$FORK** ("just fork it"), filled its target, finalised and went live as a FORK/DO pool with its LP burned. The full lifecycle, from create to raise to list to trade, runs on-chain today.

Community roots, carried forward

The **DO Portal** lets Terra Classic holders burn LUNC Cookie and BAKED and receive native $DO and $DODx through the same redemption system DO Wallet uses. It has double-payout protection built in. Routes also connect DO Chain with TON and the Dungeon chain.

> **"We didn't hide our meme-coin past. We built the launchpad we wish we'd had."**
>
> DO CORP

WHY IT MATTERS FOR $DO

Every launch pairs against $DO, pays a visible DEX fee in $DO and brings a new community onto DO Chain. Memecoins become a growth engine for the rail instead of a distraction from it.

07.4 · REAL-WORLD ASSETS

Real value, on-chain, 24/7

● GOLD & SILVER LIVE

Gold, silver, blue-chip shares and farmland have held value for generations. They have also been hard for ordinary people to reach. DO brings them onto a chain you can audit.

Golden Gram & Silver Gram

● LIVE

Hybrid metal-backed monetary units. They combine stablecoin usability with the inflation resistance of precious metals.

UNIT	TARGET	BACKING
GG	$100	0.5 g tokenised iGold + $DO and digital-asset reserves
SG	$2	0.5 g tokenised iSilver + $DO and digital-asset reserves

- **Dynamic floor:** as metal prices rise, the floor rises too.
- **Over-collateralised**, with reserves verifiable on-chain in real time.
- **Bullion redemption** via Kinesis (coming soon).

DO Equities

● SOON

Tokenised blue-chip dividend payers, backed 1:1 by real shares and tradeable 24/7 on DO DEX.

- Shares held in regulated, segregated, bankruptcy-remote custody. Redeemable and never synthetic.
- Daily custodian attestation flows to an oracle and on-chain reserves. Minting is capped at the attested share count.
- Permissioned CW20 with an on-chain KYC allowlist, non-US gating and a treaty-jurisdiction issuer SPV.
- Phased rollout: **Pilot** (1–3 tickers) → **Scale** → **Compose**.

PAXG on DO DEX

● LIVE

The gold-backed PAXG token also trades against $DO on DO DEX, with its own farm.

Kinesis gateway

● SOON

A direct route from GG and SG to physical gold and silver. It gives a true hard-asset exit.

Land Token

● SOON

Productive farmland held through community-aligned foundations, combining real yield with long-term appreciation.

07.5 · EARN

Put idle capital to work

LIVE

Traditional DeFi leaves capital idle and spread thin. On DO Chain, the same assets can secure the network, deepen liquidity and earn rewards, and the rewards come from real fees rather than endless printing.

Network staking

LIVE

Delegate $DO to any of the active validators. About 55.8% of released supply is staked, at an estimated APR of around 4.5% (variable).

LP farms

LIVE

Add liquidity, lock LP tokens for 30, 90 or 180 days and earn every second. Longer locks carry more weight. 28 farms are open, with reward pots in $DO, PAXG, INJ, WBTC, WETH and more. Anyone will be able to open a farm on any pool soon.

$DODx fee rewards

LIVE

A share of every swap fee is donated by DO Corp to $DODx holders (see chapter 06).

Liquidity provision

LIVE

Add liquidity to any of the 30 DO DEX pools and receive a share of the swap fees that pool generates, on top of any farm rewards.

Artemis DAO

LIVE

The only USTC staking protocol live on Terra Classic, and the bridge between DO and the Luna Classic economy. Stake ART to unlock USTC staking (for every $1 of ART staked, you can stake $1 of USTC) and earn in USTC, ART and Cookie.

TIER	ART APR	USTC FLEX APR
Gold	23%	21% (4 USTC · 14 ART · 3 Cookie)
Silver	18%	14% (3 · 9 · 2)
Bronze	12%	7% (2 · 4 · 1)

ART: 1,000,000,000 fixed supply, 5% transaction tax recycled into the protocol. It is run by the community through 6,000 governance NFTs (one NFT, one vote). APRs are variable and funded by trading fees. They are indicative, not guaranteed.

07.6 · NFTS & IDENTITY

Ownership that actually does something

LIVE

Most NFT marketplaces sell speculation. On DO, a collectible equips in a game, a name resolves to your wallet and a governance token votes on the metaverse.

DO Nexus

LIVE

NFT launchpad and marketplace, reachable across Cosmos zones and EVM chains from a single DO Wallet identity. Non-custodial: every listing, bid and sale settles wallet to wallet, in $DO.

COLLECTION	UTILITY
DO Copper Collectibles	The original DO Chain collectible line
Star Fighter Command skins	Pilot skins that equip in DO Gaming
DO Names	On-chain identity across the ecosystem
MF Governance	Governance rights over DO Misfits

Coming soon: cross-chain wrapping of IBC NFTs, auctions and fractional ownership.

DO Names

LIVE

One simple name instead of a 64-character address. Receive payments to it, host a web page at it with no server and no hosting fees, and carry one identity across every app.

.doit
DO Chain · paid in $DO

.lunc
Terra Classic · LUNC

.dgn
Dungeon · DGN

Each name is a token in your own wallet, self-custodied and transferable, with multi-year terms and a renewal grace period.

NFT Staking

SOON

Turns collectibles into productive assets. Stake NFTs or NFT-token pairs to earn $DO and GG rewards, unlock tiered benefits or boost liquidity-mining APYs.

> **"We don't fit in. We build it: a marketplace where ownership actually does something."**
>
> DO NEXUS

07.7 · HUMANITARIAN FINANCE

Capital that grows food, not just numbers.

● FOOD TOKEN · LIVE

Most digital assets aren't backed by anything you could eat, plant or stand on. Meanwhile, farmers with good land and real skill can't get the capital to grow. Food Token brings the two together.

Food Token

DO Corp's humanitarian coin, live now and tradeable on DO DEX. It puts on-chain capital to work on real farms in Uganda, combining permaculture crops with cattle, goats, pigs and poultry, run with local farmers. The harvest feeds families and value flows back to the community.

It grew out of the **Food Community**, a real-world initiative from the Cookie DO community that has spent years supporting farmers who work with very little. DO Chain now puts that work on-chain.

6.8M	58%	Live
UGANDAN HOUSEHOLDS KEEP LIVESTOCK[1]	OF HOUSEHOLDS DEPEND ON LIVESTOCK[2]	AVAILABLE ON DO DEX NOW

A farm that feeds itself

- **Permaculture:** hugelkultur beds, deep mulching and companion planting hold water and build soil.
- **Livestock** turn crop scraps and pasture into protein and income. Manure goes back into the beds.
- **On-chain:** Food Token connects to staking, liquidity and DAO-led initiatives.

Next: Land Token

● SOON

A real-world asset that secures and stewards productive farmland, so the ground under the mission is owned by the community.

[1] Uganda Bureau of Statistics, National Livestock Census 2021. [2] International Livestock Research Institute (ILRI), Uganda country brief. Food Token is a digital asset whose value can fall as well as rise. Returns are not guaranteed.

07.8 · GAMING · 07.9 · METAVERSE

In, out and across, without leaking value

PARTLY LIVE

A monetary rail is only useful if money can reach it and leave it easily. Every route is designed so value lands on DO Chain and settles in $DO, instead of escaping to someone else's bridge.

COMPONENT	STATUS	WHAT IT DOES
IBC Bridge	LIVE	Native interchain transfers. The LUNC ⇄ DO Chain channel is open, and INJ arrives over IBC from Injective.
DO Portal	LIVE	Burn-and-redeem routes between DO Chain and Terra Classic (LUNC Cookie, BAKED), Dungeon and TON.
Card on-ramp	LIVE	Buy INJ by card, bank, Revolut, Apple Pay or Google Pay, bridge it to DO Chain and swap on DO DEX in about five minutes.
Merch store	LIVE	Official DO Chain merchandise sold through the DEX's commerce section.
DO Bridge (EVM)	SOON	Audited bridges for EVM chains carrying tokens, NFTs and cross-chain staking and liquidity messages.
On/off-ramps & P2P	SOON	Direct fiat gateways and peer-to-peer fiat–crypto trading with smart-contract escrow.
Debit cards	SOON	Spend $DO, GG and USDC wherever Mastercard or Visa is accepted.
E-commerce layer	SOON	Merchants accept $DO, GG or USDC with instant settlement. NFTs represent products, digital goods and access passes.
Auto-Swap Engine	SOON	Pay with any token. It routes through DO DEX and settles the merchant in $DO, removing the friction of choosing an asset.

WHY IT MATTERS

Removing fiat barriers drives everyday use. Settling everything in $DO means each new payment route adds demand to the chain rather than taking value away from it.

DESIGNED FOR EVERYONE

From a first-time buyer with a debit card to a trader moving assets between Cosmos zones, the same wallet handles every route.

THE CLOSED LOOP

08

Every module feeds the next. Every flow returns to $DO.

The DO ecosystem is designed as a closed-loop economy in which each module reinforces the others. Liquidity providers deepen the pools. Trading drives volume and fees. Metal-backed units add stability. Forex expands the market. Ramps and the launchpad bring new users, and gaming and the metaverse keep them.

Every one of those flows cycles through $DO. The result is continuous value accrual, resilience through market cycles and compounding growth, because each new user and transaction strengthens a network that **belongs to its users**.

STATUS & ROADMAP

09

What's live, and what comes next

You can check our progress yourself instead of taking it on faith. Here is every product in this paper with its status in October 2026.

LIVE TODAY

- DO Chain mainnet & governance
- DO Wallet (34 networks, MFA, quarantine)
- Crypto trading on DO DEX (30 pools)
- Gold & silver: Golden Gram & Silver Gram
- Memecoins via DO Launchpad
- Staking, LP farms & $DODx rewards
- DO Portal, IBC & card on-ramp
- NFTs (DO Nexus) & DO Names
- DO Gaming (25+ cabinets)
- Food Token
- Artemis DAO (Terra Classic)

LIVE IN ALPHA

- DO Misfits metaverse: three worlds, Phase 2 build

COMING SOON

- Quantum Vault (quantum-resistant)
- Perpetuals & forex trading
- AI Trading Bots & AI Security Layer
- Kinesis bullion redemption
- DO Equities (pilot first)
- Land Token & NFT staking
- EVM DO Bridge, ramps & debit cards
- E-commerce layer & Auto-Swap
- Liquidity lock & open farm creation
- Misfits Phase 3: full VR

Delivery sequence

NOW · HARDEN

Complete the third-party DEX audit, deepen liquidity, grow the validator set through governance and expand launchpad tooling.

NEXT · MARKETS & SECURITY

Perpetuals and forex trading, the quantum-resistant Quantum Vault, Kinesis bullion redemption for GG/SG and a DO Equities pilot with 1–3 tickers.

LATER · EVERYDAY MONEY

Debit cards, e-commerce and Auto-Swap, Land Token, EVM bridging, the scaled equities rail and VR worlds.

DO Corp is self-funded and can deliver this roadmap over time; partnership would speed it up. Timing may change with audits, regulation and markets.

YOUR PLAN SB7 · PLAN · STAKES

10

Three steps to the people's chain

01

Open a DO Wallet

Create a wallet, import a seed or set up a multisig at do-wallet.com. Your keys never leave your browser.

02

Use the ecosystem

Get $DO on DO DEX, then trade, farm, launch, collect, play and back Food Token. Everything settles in $DO.

03

Help govern the chain

Stake with a validator, burn $DO for $DODx and vote on the proposals that shape DO Chain.

Two futures for the same money

WITHOUT DO · FAILURE

- Your savings keep losing value to inflation.
- The best assets stay behind geographic and wealth gates.
- You keep juggling apps, bridges and seed phrases, and keep risking phishing.
- The tokenisation wave is priced in before you get a seat.
- The chains you use are run by the companies that launched them.

WITH DO · SUCCESS

- You hold a settlement asset whose supply tightens with use.
- Crypto, gold, equities and farmland are reachable from one wallet.
- Security is built into the chain and the wallet, not bolted on.
- You share in the fees of the network you help govern.
- Your activity helps fund food for families in Uganda.

> "Money you can verify, not just trust, on a chain that answers to you."
>
> THE TRANSFORMATION

CALL TO ACTION SB7 · CTA

Join the people's chain.

Pick your way in. Every door leads to the same chain, the same settlement asset and the same community.

IMPORTANT INFORMATION

Please read

Not financial or legal advice

This whitepaper is for information only. It is not an offer to sell, or a solicitation to buy, any token, security or other financial instrument, and it is not investment, financial, legal or tax advice. Consult your own independent advisers before making any decision.

Digital-asset risk

Digital assets are highly volatile and can lose some or all of their value. Smart contracts, bridges, oracles and wallets carry technical risks, including bugs and exploits. Only commit what you can afford to lose, and do your own research.

Rewards and yields

Staking APRs, farm emissions, Artemis tiers and $DODx fee rewards are variable and depend on network activity and fee volume. They are indicative, not guaranteed. $DODx is a governance token. Fee sharing to $DODx holders is a voluntary donation by DO Corp and may change.

Forward-looking statements

Products marked *Coming soon*, and the roadmap generally, describe current plans and intentions. Features, sequencing and timing may change because of technical development, audits, regulation, partnerships or market conditions, and some may not launch.

Regulation and eligibility

Some products, especially tokenised equities and other real-world assets, will be subject to KYC, eligibility rules and geographic restrictions, including non-US gating. Availability depends on the laws of your jurisdiction.

Data in this paper

Network and product figures were read from public DO interfaces on 9 October 2026 and change continuously. Third-party statistics are attributed where used.

Who we are

DO Chain is a decentralised public blockchain governed by its validators and $DODx holders. DO Corp (operated through Luncverse Sociedad Anónima and DO Misfits) builds and operates applications on DO Chain and does not control the chain.
